Job description, responsibilities and duties

IT analyst position

We are looking for a colleague for IT analytical position to support our colleagues (developers, testers, designers) and see things from their perspectives. We are working on several interesting projects and providing a great opportunity for enthusiastic person who can help us with:

- collection, specification and analysis of customer requirements
- creation of analytical documentation and outputs in EA Sparx
- communication with the development team, customer and other team members
- responsibility for the formal and content quality of the outputs for the customer (analysis, documentation, presentations, minutes, etc.)
- monitoring trends, continuous education in the entrusted area
- Quality assurance and overall responsibility for meeting customer requirements

If you have:

- analytical and logical thinking
- experience with analytical tools (CASE Tools)

- knowledge of Enterprise Architect Sparx and UML
- and you want to work for a strong and leading provider of comprehensive IT solutions and services, contact Asseco Central Europe

Software Developer (Java)

We are looking for a programmer for the development and implementation of a production system for various commercial and public subjects such as health insurance companies, banks and insurance. The system is based on the Java programming language.

This is a large, long-term and stable project, the purpose of which is to improve and increase quality and efficiency for system users.

Your job tasks will be mainly in:

- technical solution design and software development
- support in the analysis of client requirements, collaborate closely with business analysts in specking new features, initiate test coverage for existing features, and help bring innovative and delightful designs to life
- active teamwork with team members (team leader, developers, analyst, tester)

We're looking for open-minded, empathetic people and Java geeks to join our team and make our solutions shine for the clients.

If you are someone, who:

- is able to write clean and solid code
- is keen on Java (either frontend or backend)
- loves improving the Design of existing code
- manages to work effectively

do not hesitate to contact Asseco Central Europe

Required education level
